LUCAS MATEUS ALVES LOUGON

Mid-Level Backend Developer | Scalable APIs - Microservices - PostgreSQL & NoSQL - Docker

Cariacica, ES - Brazil | (27) 99531-8164 | lucas.mal2005@gmail.com | linkedin.com/in/lucas-lougon | github.com/LucasAlvesLougon

PROFESSIONAL SUMMARY

Backend developer with solid experience designing and maintaining highly available APIs, modular event-driven architectures, and integrations across heterogeneous systems. Skilled in software design patterns (Clean Architecture, DDD, Chain of Responsibility with transactional checkpoints and idempotency), advanced relational databases (PostgreSQL), NoSQL (MongoDB, Redis), automated test suites (Pytest/Vitest), Docker containerization, and CI/CD pipelines. Collaborative with product and frontend teams, active in code reviews, technical standards, and mentoring.

TECHNICAL COMPETENCIES

Backend & Architecture: Python (FastAPI), TypeScript, JavaScript (Node.js/NestJS concepts), Clean Architecture, microservices, DDD, real-time WebSockets, REST & SOAP APIs.
Resilience & Queues: Asynchronous processing, messaging and queues, fault tolerance, concurrency, idempotency, and distributed execution with checkpoints.
DevOps & Practices: Docker, Git Flow, Conventional Commits, CI/CD pipelines, Scrum/Kanban, technical code reviews, and continuous mentoring.

Databases: PostgreSQL (advanced modeling, triggers, indexing, and query tuning), NoSQL (MongoDB, Redis for cache/queues), SQLAlchemy 2.0.

Quality & Security: Automated testing (Pytest, Vitest - unit and integration), OAuth 2.0, JWT, authentication/authorization, robust validation (Pydantic), ADRs.

PROFESSIONAL EXPERIENCE

Mid-Level Developer | Globalsys | July 2026 - Present - Remote

- Designed and implemented the backend architecture for end-to-end transactional automation for pharmaceutical quotations and automated ERP billing.
- Built a modular Chain of Responsibility pipeline (13 links) with per-step transaction management and checkpoints, enabling immediate recovery from failure without reprocessing.
- Developed a decoupled layer integrating REST APIs, SOAP Web Services, and Playwright automation routines, ensuring resilience and consistent interface contracts.
- Built batch data validation and cleansing mechanisms, cross-checking ANVISA/CMED regulatory databases with the live relational catalog.
- Reviewed team code, ensured automated test coverage, and supported developers adopting concurrency and idempotency practices.

Software Developer | Grupo Autoglass | January 2025 - June 2026 - Vila Velha, ES

- Developed and maintained critical services and REST APIs for synchronization, order processing, and inventory consolidation across internal systems.
- Advanced SQL query optimization in high-volume PostgreSQL databases, reducing execution time and removing I/O bottlenecks from analytical endpoints.
- Implemented strict data validation and transactional consistency rules, mitigating operational inconsistencies between legacy microservices and new applications.
- Actively participated in architecture discussions, agile ceremonies (Scrum/Kanban), and continuous alignment with frontend, QA, and product teams.

Backend Development / Automation Intern | Grupo Autoglass | January 2024 - December 2024 - Vila Velha, ES

- Built Python routines for asynchronous ingestion and data ETL, integrating external APIs through SQLAlchemy with failure handling and structured logs.
- Designed relational models and persistence routines with performance monitoring and support for continuous feature delivery.

FEATURED PROJECT

Cine Random | Scalable & Real-Time Platform | August 2026

- Layered microservices architecture (Clean Architecture & DDD: Routers, Services, and Repositories) with FastAPI, bidirectional WebSockets, and a React 19 PWA frontend.
- End-to-end security with OAuth 2.0 and JWT, relational persistence with PostgreSQL/SQLAlchemy, and distributed real-time communication.
- Robust automated test suite with more than 54 unit and integration tests (Pytest and Vitest), with technical documentation guided by ADRs.

EDUCATION & LANGUAGES

Information Technology Technologist (CST) - FAESA University Center | February 2023 - In progress
Languages: Portuguese (native) - English (intermediate / fluent technical reading and writing for documentation and distributed teams)
